

10. Potential and Real Confounds: (2 marks)

a. What confounds did you predict would interfere with your experiment.

- face of foster parent or child impact who steps in
- gender of foster parent or observers. women have more maternal instinct
- males less likely to confront a female in public (protective)

b. In reflection, what confounds actually did interfere with your experiment.

11. How reliable is this experiment, in your opinion? Explain.

200 participant = data
10 small cities / rural town / metropolis cities ...

means low reliability b/c location affects the resulting behaviour.

12. Procedure: Describe the procedure you created in carrying out your experiment. Be as detailed as possible. (3 marks)

This was a practice run-through to help you understand how to answer the questions in the next assignment, section 1.3.2.

Now pick your own video sample from the What Would You Do videos on YouTube. Make sure you pick one that's not already been picked by someone in the class (see the list on the next page).

Use the QR Code or click the link to the Assignment page in Word doc form and complete the questions as best you can. You'll see the little Globe - that's the link.
